

I also look upon him as a
true Christian man.

We have difficulty now-a-days
in getting men to devote them-
selves to that Science. Our
modern students have too
too much to study in a
superficial way, & there are
not many posts in Science
open to them. Our Country
does not do what it ought
for the encouragement of
Science.

I shall always be glad to
help you in your studies.

Yours truly
A. M. Mason

We want Fellowship in Science

A. M. Mason
Edin. 31st March 1870

Dear Dr. Gray

I was glad to hear
from you. It is some long
time since we had the pleasure
of meeting, & I had hoped to
have seen you before your
return to America.

I shall be glad if I can help
in the matter concerning which
you write.

D. W. Rawley, what has
long been a fellow student of
Robert Lee. He is a good

Maurice Embury Dozier.
He has had a good deal
of practical experience in
the examination of plants &
the use of the microscope.
He studied for a year at
Berlin. Living as he did
in the garden he had excellent
opportunities of seeing plants.
He assisted me for 2
years in my Histological
class.

I think that he would suit
you as an assistant.

At present he is engaged

teaching Botany at Cien
-cestra Agricultural College
as I believe he is
a first-rate man. I have
known him in Edinburgh & I was
the means of getting him
the opportunity under
Dennett. I am sure he would
not be disposed to leave his
present job. His present
object of study is the
in fruit plants & this
is a most pleasant man
in every way. He has
both the manner & the
in his former position.
